

Do you see clients with PTSD and Complex PTSD?

Be part of an experiential program that will equip you with effective therapy skills that you can immediately put into practice for lasting impacts on your clients' lives.

Did you know?

Individuals who receive trauma-focussed therapy halve their risk of having PTSD after treatment.*

One of the most effective trauma-focussed therapies is Prolonged Exposure therapy - a treatment designed to help clients emotionally process traumatic experiences and improve day-to-day functioning. PE therapy can be adapted to meet the needs of individual clients, including those with previous trauma of child abuse, rape, assault, combat, accidents and disasters.
